

Choosing the Right Hood Filter

Galvanized Hood Filters

Galvanized Grease Filters are the least expensive option utilized in closed kitchens, not visible to your guests. Galvanized Steel Hood Baffle Filters provide strong rugged performance and superb corrosion resistance.

Aluminum Hood Filters

Aluminum Grease Filters offer a clean aesthetic appearance while remaining a cost effective option. Aluminum Hood Baffle Filters have a seamless smooth surface that permits grease run-off into hood collection troughs, safe, dependable, positive flame barrier protection.

Stainless Steel Hood Filters

Stainless Steel Grease Filters have a high shine appearance and are generally used in open kitchens with visibility to your guests. Stainless Steel Hood Baffle Filters are great for tough commercial appliances and maximum permanent protection against rust and corrosion.

Spark Arrestors Filters

Spark Arrestor Filters meet the NFPA 211 requirement for solid fuel burning appliances.

CHOOSING THE PROPER HOOD FILTER SIZE

Filters should be placed inside the canopy hood with the baffles running vertically.

The **vertical dimension always comes first** when placing an order. The **horizontal dimension is always the second number**.

A mistake commonly made when ordering baffle grease filters is reversing the dimensions. Filters should be placed inside the canopy hood with the baffles running vertically. The vertical dimension always comes first when placing an order. The horizontal dimension is always the second number.

NFPA 96 Code 6.2.3.1 states "Grease filters shall be listed and constructed of steel or listed equivalent material".
